GAJIPRO HOSTINGER DEPLOYMENT

Storage Fix & Complete Setup Guide

Generated: 27 October 2026, 02:16:19

EXECUTIVE SUMMARY

Aplikasi GajiPro telah diperbaiki untuk support upload gambar di Hostinger shared hosting. Masalah symlink tidak support di Hostinger sudah diselesaikan dengan menggunakan disk 'uploads' yang point ke folder public/uploads/ (web-accessible). Dokumen ini panduan step-by-step deployment ke Hostinger.

1. MASALAH & SOLUSI

Aspek	Masalah	Solusi
Symlink	Hostinger tidak support symlink	Gunakan disk "uploads" → public/uploads/
Upload	File upload error 404	Controller store ke disk "uploads"
View	Gambar tidak muncul (URL wrong)	View gunakan Storage::disk("uploads")->url()
Document Root	Tidak ada opsi setting	Create .htaccess di root rewrite ke public/
Config	.env perlu setup manual	Create .env via hPanel file manager

2. PERUBAHAN CODE (SUDAH SELESAI DI LOCALHOST)

Semua perubahan berikut sudah dilakukan di localhost dan siap di-upload ke Hostinger:

config/filesystems.php

Tambah disk 'uploads' pointing ke public/uploads

app/Http/Controllers/Superadmin/SoalController.php

Update 3 upload method: store, update, uploadGambarEditor (ubah disk public → uploads)

resources/views/superadmin/soal/preview.blade.php

Update 3x Storage::url() → Storage::disk('uploads')->url()

resources/views/superadmin/soal/_form.blade.php

Update 3x Storage::url() → Storage::disk('uploads')->url()

.htaccess (root appsku/)

NEW - rewrite subdomain requests ke public/ folder

.gitignore

Added /public/uploads (ignore user upload files)

public/uploads/ folder

NEW - create via file manager (permission 755)

3. DEPLOYMENT STEP-BY-STEP

STEP 1: Upload semua file ke public_html/program/

Method: FTP / File Manager Hostinger
Source: Folder lokal C:\laragon\www\appsku\
Destination: public_html/program/

Files to upload (dari localhost):

```
app/                    (seluruh folder)
bootstrap/              (seluruh folder)
config/                 (seluruh folder - PENTING: filesystems.php sudah update)
database/               (seluruh folder)
lang/                   (seluruh folder)
public/                 (seluruh folder - PENTING: .htaccess & uploads folder baru)
resources/              (seluruh folder - PENTING: view files sudah update)
routes/                 (seluruh folder)
storage/                (seluruh folder)
tests/                  (seluruh folder)
vendor/                 (seluruh folder - dari composer install)
.env.example            (untuk reference)
.htaccess               (NEW - di root appsku/)
artisan                 (file)
composer.json           (file)
composer.lock           (file)
package.json            (file)
```

STEP 2: Create .env di public_html/program/

Via hPanel file manager:
1. Navigate ke public_html/program/
2. Create file: .env
3. Copy & paste konfigurasi berikut:

```
APP_NAME=GajiPro
APP_ENV=production
APP_KEY=base64:JthfafwPZ9TdY5v035eEyZFIu+amP/SxI8zP51Erwyg=
APP_DEBUG=false
APP_URL=https://program.lkppanrita.com

APP_LOCALE=en
APP_FALLBACK_LOCALE=en

BCRYPT_ROUNDS=12

LOG_CHANNEL=stack
LOG_STACK=single
LOG_LEVEL=debug

DB_CONNECTION=mysql
DB_HOST=127.0.0.1
DB_PORT=3306
DB_DATABASE=u426433440_lkp
DB_USERNAME=u426433440_lkp
DB_PASSWORD=Sur!4laswe

SESSION_DRIVER=database
SESSION_LIFETIME=120
SESSION_ENCRYPT=false
SESSION_PATH=/
SESSION_DOMAIN=null

BROADCAST_CONNECTION=log
FILESYSTEM_DISK=local
```

```
QUEUE_CONNECTION=database

CACHE_STORE=database

MAIL_MAILER=log
MAIL_SCHEME=null
MAIL_HOST=127.0.0.1
MAIL_PORT=2525
MAIL_FROM_ADDRESS="noreply@gajipro.com"
MAIL_FROM_NAME="GajiPro"
```

PENTING: Jangan commit .env ke git (sudah di .gitignore). APP_KEY harus sama dengan lokal agar encryption konsisten.

STEP 3: Create folder structure untuk uploads

Via hPanel file manager: Create folder struktur di public_html/program/public/uploads/

```
public/uploads/
  ■■ panritta/
      ■■ soal/
          ■■ editor/          (gambar upload CKEditor)
          ■■ opsi/            (gambar opsi A-E form)
          ■■ pembahasan/      (gambar pembahasan form)
```

Permission: Set setiap folder ke 755 (writable by PHP).
Right-click folder → Properties → Permission: 755

STEP 4: Migrate file gambar lama (optional)

Jika ada file gambar dari localhost sebelumnya:

```
1. Backup file lokal dari: C:\laragon\www\appsku\public\uploads\
2. Upload ke hosting: public_html/program/public/uploads/
3. Verify gambar muncul di preview soal
```

4. TESTING CHECKLIST

1. Login ke aplikasi

Expected: https://program.lkppanrita.com → login dengan akun

2. Upload gambar di CKEditor (opsi A)

Expected: Edit soal → opsi A → upload gambar 11KB

3. Verifikasi response

Expected: Network tab → upload-gambar-editor → Status 200 OK

4. Verifikasi URL

Expected: Response URL: /uploads/panritta/soal/editor/[filename].png

5. View gambar

Expected: Gambar muncul di editor, tidak error 404

6. Save soal

Expected: Save soal dengan gambar → redirect ke list

7. Preview soal

Expected: Klik preview → gambar soal + opsi + pembahasan render OK

8. Edit soal existing

Expected: Edit soal dengan gambar lama → preview OK

9. Upload form

Expected: Upload gambar di form soal (gambar_soal, opsi, pembahasan) → save OK

10. Check storage

Expected: File manager: verify file ada di public/uploads/panritta/

5. TROUBLESHOOTING

■ Upload gambar 404 Not Found

• Folder public/uploads/ exist dengan permission 755?
• .htaccess di root (appsku/) exist?
• APP_URL di .env correct?

■ Gambar upload tapi URL salah (localhost port muncul)

• APP_URL di .env harus: https://program.lkppanrita.com (bukan localhost)
• Jangan lupa clear cache: php artisan config:cache (via SSH)

■ Permission denied saat upload

• Set permission folder 777 atau 755
• Check ownership folder (harus www-data atau hosting user)

■ Gambar lama tidak muncul di preview

• File masih di storage/app/public/? Migrate ke public/uploads/
• Check view pakai Storage::disk('uploads')->url()

■ White screen / 500 error

• Check error log: storage/logs/laravel.log
• .env APP_KEY correct?
• Database credentials valid?

■ File upload blank/corrupted

• Max upload size di hosting? Check: Tingkat Lanjut → Konfigurasi PHP
• Temp folder full? Request Hostinger support

■ CSS/JS tidak load (404)

• public/build/ folder exist?
• .htaccess rule untuk public/ folder correct?

6. FILE CHECKLIST UPLOAD

[UPDATED] config/filesystems.php

Disk 'uploads' sudah ada

[UPDATED] app/Http/Controllers/Superadmin/SoalController.php

Upload method ubah ke 'uploads'

[UPDATED] resources/views/superadmin/soal/preview.blade.php

View ubah Storage::url()

[UPDATED] resources/views/superadmin/soal/_form.blade.php

View ubah Storage::url()

[NEW] .htaccess (root)

Rewrite ke public/

[MANUAL CREATE] .env (hosting)

Via hPanel file manager

[NEW FOLDER] public/uploads/

Create via file manager, permission 755

7. CATATAN PENTING

1. APP_KEY di .env HARUS sama dengan lokal (untuk encryption consistency)

2. .env file JANGAN di-commit ke git (sudah di .gitignore)

3. Folder public/uploads/ JANGAN di-commit (user-generated content)

4. Jangan hapus storage/app/public folder (Laravel perlu untuk session/cache)

5. Setelah upload selesai, test login + upload gambar di production immediately

6. Monitor storage/logs/laravel.log untuk debug error
